School of Physics

In the words of Mozart, no concerto comes into our lives and is complete without its melody, but the composer Mozart also wrote with his signature trumpet notes.

Mozart redefined the boundaries of classical music. In some way he has become part of the grand symphony of human expression. It is a composer that all humanity worshiped; but before all of those concerts, Mozart spent time and read books on chemistry.

Chemistry magazine introduced Mozart as Mozart studies for chemistry.

In this short video titled, "Albion - The Biochemical Adventure of Wolfgang Amadeus Mozart," Mr. Ilokun Yeo and the team at Comprehensive Cancer Centre paints a beautiful picture of how Mozart's knowledge about chemistry influenced his composition. The biochemist believes that he will have a good business after studying Mozart, calling it an exciting opportunity.
